

Description:

Condition reading based on the metrics selected by user across the entire rig/equipment

Description:

RUL reading based on the data, user input on the system

Exploratory Data Analysis (EDA)

Quickly inspect distributions, missing values, and correlations.

Description:

EDA, reading based on the data input from user

Description:

EDA1, Based on metrics user selected on control panel, and show the outlier, that overlap it can cause failure or accident

Description:

EDA2, based on the comparison metrics that user have select on the control panel system
